PROBLEM STATEMENT

“Educational institutions face challenges in maintaining and analyzing student academic performance. Traditional methods lack automation, proper visualization, and fast data retrieval.”

ABSTRACT

“The Student Performance Dashboard is a desktop application integrating Java, R, and Data Structures... It provides a dashboard with total students, toppers, averages, and charts. Users can add, edit, delete, and search students.”

CONCLUSION

The Student Performance Dashboard is a complete academic performance management tool combining Java GUI development, R analytics, and Data Structures. It is efficient, interactive, and professional. This project serves as an excellent demonstration of software engineering concepts and integrated technologies

ADVANTAGES

- Fast search using HashMap
- Professional charts generated in R
- Clean and modern UI
- Easy to maintain and modify
- Uses simple CSV for storage
- High accuracy in results
- Suitable for academic projects and real-world evaluation

Bhavana 216

FUTURE ENHANCEMENTS

- Convert CSV storage to MySQL
- Add login system for teachers
- Add AI-based grade prediction
- Add trend analysis across semesters
- Add dark mode U
