SPHOORTHY

ENGINEERING COLLEGE

(UGC AUTONOMOUS)

RTRP TOPIC:- CSE

INSIGHT HUB

Introduction

- CSE Insight Hub is a smart web-based platform designed to guide students in choosing the right career path in Computer Science. Many students face confusion due to the wide range of domains like AI, Cloud Computing, and Cybersecurity, along with uncertainty about colleges based on their EAPCET rank.
- This platform solves that problem by analyzing a student's rank, interests, and skillset through a structured approach. It then provides personalized recommendations on suitable domains, colleges across India, and future career opportunities.
- By combining student analysis with current industry trends, CSE Insight Hub acts as a virtual career advisor, helping students make informed and confident decisions about their future.

How it works:-

- When the user accesses the platform, the system captures the EAPCET rank as the primary input parameter through a validated input interface.
- Based on this input, the system displays a curated list of trending and emerging technologies in the CSE domain, using predefined datasets or real-time industry insights.
- The platform then initiates an interactive questionnaire module designed to evaluate the user's interests, logical ability, and domain inclination.
- The system processes both the rank data and questionnaire responses using a rule-based or intelligent recommendation algorithm to determine the most suitable CSE domain.

- Once the domain is identified, the system retrieves and presents a list of relevant universities across India, filtered according to the user's rank and admission criteria.
- Finally, the system displays future career opportunities, job roles, and growth prospects associated with the selected domain, enabling informed decision-making.

Sustainable development goals

- SDG 1: Quality Education
- SDG 2: Decent Work & Economic Growth
- SDG 3: Industry, Innovation & Infrastructure
- SDG 4: Reduced Inequalities
- SDG 5: Partnerships for the Goals

Technnnologies used:

Frontend:

- HTML → Structure of the web pages
- CSS → Styling and design
- JavaScript → Functionality and interactivity
- React.js → Building dynamic UI components

Backend:

- JavaScript (Node.js) → Handles server logic
- Express.js → API creation and routing

Interface: for example

CSE Insight Hub

Interest & Skills Assessment

Answer the following questions to help us understand your strengths.

What type of projects do you enjoy?

- Building Apps
- Analyzing Data
- Securing Systems

How do you solve problems?

- Logically
- Creatively

Are you interested in AI?

- Yes
- No

Next

Recommended Career Path for You

We suggest you pursue:

Data Science

Based on your rank and assessment, this domain is the best fit for you.

Machine Learning

Big Data

Benefits of Data Science

High Salary Potential

In-Demand Skills

Research Opportunities

Flexible Career Options

Conclusion:

CSE Insight Hub is a smart web platform that helps students choose the right domain in Computer Science by analyzing their EAPCET rank and personal interests. The system simplifies decision-making and guides students toward better academic and career choices.

The platform not only highlights emerging technologies but also bridges the gap between student potential and industry demands by suggesting suitable domains, relevant colleges, and future career opportunities. This ensures that students gain clarity and confidence in selecting their specialization early in their academic journey.
