PROBLEM STATEMENT

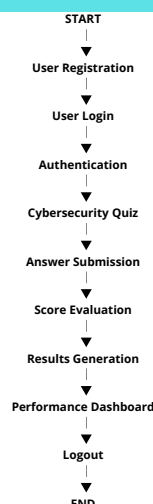

Many users lack awareness of cybersecurity threats such as phishing, weak passwords, and malware attacks. Traditional learning methods are often less engaging and fail to provide practical assessment. A gamified platform is needed to improve cybersecurity knowledge through interactive quizzes and Performance and evaluation

ABSTRACT

CyberQuest is a web-based cybersecurity awareness platform designed to educate users through interactive quizzes and assessments. The system allows users to register, log in, attempt cybersecurity quizzes, and view their performance. It provides instant feedback and score evaluation to enhance learning. The platform promotes cybersecurity awareness in an engaging and user-friendly manner.

CONCLUSION

CyberQuest successfully provides an engaging platform for learning cybersecurity concepts through quizzes and performance assessment. The system enhances user awareness, encourages continuous learning, and helps users develop better cybersecurity practices in a simple and interactive way.

ADVANTAGES

- Improves cybersecurity awareness through interactive learning.
- Provides instant score calculation and feedback.
- Tracks user performance and learning progress.
- Easy-to-use web-based platform.
- Encourages secure online practices.
